(4-5-tfc)

SPECIAL FLASH:- Now is the time to paint "your home" with "famous STAG PAINTS." ONE GALLON MAKES TWO. Use "AQUELLA" for "water proofing" your CINDER & CEMENT BLOCK HOME, or basement. FOR "BUILDING MATERIALS OF ALL KINDS, see H. E. DeWITT COMPANY, LYNCHBURG, VA. (4-5-4tc)

A REGULATION FIXING THE SEASON AND CREEL LIMIT ON TROUT AND THE SEASON ON BASS AND WALL-EYE PIKE

Pursuant to a proposal authorized by the Commission of Game and Inland Fisheries, February 26, 1951, and published as required by law, the following regulation was adopted at a meeting of this Commission at Richmond, Virginia, March 23, 1951.

(1) The statewide open angling season for trout shall be from 12 o'clock noon, April 20, 1951 to one hour after sunset September 15, Eastern Standard Time, and from one hour before sunrise to one hour after sunset on intervening days, provided however that each year thereafter the open angling season for trout shall begin at 12 o'clock noon on May 1, with no change in the hours of fishing.

The daily creel limit shall be eight trout.

(2) The open angling season for large mouth, small mouth, spotted and rock bass, and wall-eye pike shall be from June 1 to December 31 west of the Blue Ridge Mountains and June 1 to March 15 east of the Blue Ridge Mountains. Provided however, that in Claytor Lake there shall be no closed season on bass during the months of April and May each year. Provided further, the season on wall-eye pike in New River shall extend to March 31.

All regulations or parts of regulations in conflict with the foregoing are hereby rescinded.

This regulation shall become effective April 16, 1951.

By order of the Commission of Game and Inland Fisheries.
Beverley W. Stras, Jr., Chairman.

TRUSTEE'S SALE
Pursuant to authority vested in the undersigned Trustees by virtue of two certain Deeds of Trust, dated July 29, 1947 and November 3, 1949, of record in the Clerk's Office of the Circuit Court of Appomattox County, Virginia, in D. B. 48, at Page 359 and Misc. Lien Book 2, at Page 237, that whereas default having been made in the payment of the indebtedness thereinsecured, and upon request by the holder of said obligations that said trusts be executed, the following described real estate and personal property will be offered for sale in compliance with the terms and conditions of the aforementioned instruments.
DESCRIPTION:
That certain tract or parcel of land with all buildings and improvements thereon, all privileges and appurtenances thereunto belonging, lying and being in Stonewall Magisterial District of Appomattox County, Virginia, about Eleven (11) Miles North of Appomattox Court House, on the West side of State Highway No. 26, leading from Appomattox to Bent Creek, Virginia, and more particularly described as follows: Beginning on the South West corner of Thomas R. Phelps' line on the corner of M. A. Booker and Thomas R. Phelps on the North West side of State Highway No. 26, leading from Appomattox to Bent Creek, Virginia; thence North Westward along the line of M. A. Booker and Walter Bergman 390 yards to John Walton's line; thence along Walton's line 175 yards North East to Thomas R. Phelps' line; thence Southward along the line of Thomas R. Phelps' line to State Highway No. 26, 390 yards; thence Southward along State Highway No. 26, 175 yards to the beginning on said Highway. Sold by the boundry and not by the Acre.
There being located thereon a Cement Block Building suitable for Garage, Service Station, etc., and a good location.
Also various and sundry garage machinery and equipment.
Place of Sale: On the Premises.
Time of Sale: 3:00 O'Clock P. M. SATURDAY, APRIL 7, 1951.
Terms of Sale: Cash.
Auctioneer: James H. O'Brien.
Trustees: R. L. & Wm. W. Burke. (3-1-, thru April 5c)

CANDIDATE'S CARD
To the voters of the Southside District of Appomattox County:
I wish to announce that I will be a candidate to succeed myself as Supervisor for Southside Magisterial District, subject to the Democratic Primary election of August 7, 1951. If elected I promise to serve all the people of the district to the best of my ability. I will appreciate your support and influence.
F. L. MURPHY.
(3-29--8-7)

IF YOU want to reorder on Fuller Brush products, I will be glad to take care of your orders. Call me at The Flower Shop.
Mrs. L. A. Young. (1tc)

America's Death Rate Reaches Low Ebb in 1950

The year 1950 witnessed marked improvement in the country's health, with the death rate declining to the lowest level in our history.

New low levels in mortality were established for a number of diseases, and for some the reduction was substantial. General health conditions during the coming year should be even better, barring severe epidemic or other unforeseen contingnes. The year's health record and the promising forecast are vital assets for national defense in the present crisis.

The death rate in 1950 was about 9.6 per 1,000, or 1 per cent below the previous record of 1949. This outstanding record was made in the face of a continued increase in the proportion of older persons in the population and despite a wave of respiratory disease which spread over a large part of the country early in the year.

Nevertheless, the mortality from respiratory diseases was kept in check. The influenza rate, although above the 1949 level, compared favorably with that of earlier years. Indications are that the death rate from pneumonia will differ little from the record low in 1949, and may even better it. In any case, the net effect of the outbreak of respiratory disease was not of major proportions, and any losses that may have been due to it were more than offset by the gains in other directions.

May Be "Missing Link"

Skull casts of a creature that seems to fall into the gap between the great apes and man have been received by the Smithsonian institution from the British museum. Fossil remains of this anthropoid form, known as Proconsul, were found recently in Kenya, East Africa, by the British anthropologist Dr. L. S. B. Leakey. It is essentially a small and somewhat primitive type of great ape, but some features seem closer physically to man than any found in the gorillas, chimpanzees, or orangs now extant. This is especially true of the teeth. The bones were found in deposits of the Miocene geological era, about 25,000,000 years ago.

Sheep Scab Outbreaks

The often-baffling return of sheep scab in flocks that are supposedly cured has been fully explained by new experiments carried out in England. Key to the problem, British veterinarians found, is a hideout on the sheep's body where scab mites find refuge while the animals are being sheared or treated. Not that the mites run for cover when they see an insecticide dip being readied or when the wool clip starts. On the contrary, the move is a random scattering for better or worse, during which some of the luckier mites find life-saving shelter in such places as the ears or under the tail—where the dip or clipper doesn't get to them.

"Fractional Crystallization"

Why is it that freezing water purifies it? When water freezes the molecules get together in a regular solid crystalline arrangement. The molecules of the impurities are too big or too little to fit into the same space in the crystal as the water molecules, and so they get shoved aside. This process is used to purify many commercial chemicals. It is known as "fractional crystallization."

Rust Inhibitor Recommended Before Painting Metal Roof

Brushing aluminum paint over rust on metal roofs is just a waste of time and money, according to A. J. Bell, Michigan state college extension agricultural engineer.

Bell says painting metal roofs with aluminum paint is a good thing—provided it is done correctly. But, he adds, 99 per cent of the time farmers put paint on over rust, cause themselves a lot of extra work, and throw away money because the rusting is not stopped.

If aluminum is used, the first coat should be the rust inhibitor followed by the aluminum. The Illinois extension service, The Farm bureau, and the American Zinc institute have been experimenting with metal roof paint for the past 15 years, the engineer reports.

Of 92 different paints they tried out only six or seven had much value for metal roofs, Bell says. Zinc metal paint has stood up the best. It is composed of Zinc dust, zinc oxide, and oil.

Found to be second best was red oxide, which has been used on barns for many years. Red oxide should be of high quality if it is used for roofs. Aluminum ranked third best and was found to have a longer duration if two coats were applied.

Though steel brushing has been recommended for some time, it has been given credit for the life of a paint job lasts about as long when the rust is swept off with a stiff broom. There isn't enough extra life in the paint to warrant steel brushing.

Ecuador Begins to Enjoy Its Economic Development

A promising little bank of strategic materials—Ecuador—is in the process of reassessing the full extent of its capital resources.

With an economic development program under way, the South American nation has just taken the first national census since its birth as an independent country 120 years ago. The population count is expected to be considerably above a 1949 estimate of nearly 3,560,000.

Ecuador got its start toward a brighter future during World War II when it provided the United Nations with commodities well-nigh indispensable to victory—quinine from cinchona bark, balsa wood for airplane and life raft construction, kapok for life preservers, oil, natural rubber, and food products such as cocoa, coffee and rice.

Equally more important was the loan of Ecuador's Seymour Island in the Galapagos group to the United States for use in guarding the Pacific approaches to the Panama canal. In return, U.S. dollars built roads and encouraged the highest economic development in the nation's history.

Despite wartime advances and postwar efforts toward financial health, Ecuador still has a substantial task ahead to make the most of its natural resources and achieve a lasting economic stability. Diverse geography, inadequate education facilities, poor communications and, in parts, a tropical climate are handicaps to be overcome.

New Uses for Radar

Since the big war's end, a constantly improving radar has been turned to many civilian needs. Set up at airports, it brings commercial transports down through the heaviest overcast, and in foggy harbors clears safe lanes for congested traffic. It is used to prevent collisions between planes and ships. It is valuable to weathermen in tracking storms; to whalers in warning of icebergs; to physicists in studying meteors streaking through the earth's atmosphere.

Lady Bug Riddance

Some people complain of ladybugs in their homes. In general, and in moderate numbers, these insects are regarded as beneficial since they eat other soft-bodied insects. If they are so numerous as to be a nuisance, you might be able to eliminate them on a warm day, when they are found on the window panes, by opening the windows. Another method would be to use a new aerosol bomb in the infested room, or even to kill them by hand.

Frozen Orange Juice

There is essentially no loss of vitamin C in concentrated frozen orange juice, as now marketed by the major producers. Reliable studies indicate that a good manufacturing process protects at least 90 per cent of the initial vitamin content. The dilution ratio recommended is such that the final result can be considered practically the equivalent of the original product.

Facts About Clouds

Folks who complain of always carrying an umbrella when it doesn't rain need to brush up on their cloud-lore. When clouds are wispy, white, and fluffy, or like a fine, gray blanket high overhead, rain gear can be left at home with relative safety. The rain, or "nimbus" cloud is low-hanging, dark, and shapeless. It has an unmistakable ominous appearance, even to the incurable optimist.

CARD OF THANKS:
I wish to express my sincere thanks to our friends and relatives for the beautiful flowers and other expressions of sympathy during my recent bereavement.
Mrs. Joseph D... Baltimore, Md.

CARD OF THANKS:
I want to express my appreciation for all the nice gifts, cards, and flowers I received during the time I was in the hospital and after I returned home.

PERSONALS

Miss Mary Lou Tucker, of Lynchburg visited Mrs. C. S. McDearmon today.

Dr. L. L. Gayle spent the week-end in Fredericksburg with his brother, Ellwood Gayle.

Mr. and Mrs. Edwin S. Barron, Jr., of Washington, D. C. will spend the week-end with her parents, Mr. and Mrs. G. L. Doss.

Mr. and Mrs. Hugh Martin, of Timmonsville and Mr. and Mrs. Russell Parsons, of Portsmouth, visited relatives here during the week-end.

Mrs. H. C. Almond is improving at the Virginia Baptist Hospital, where she underwent an operation on Friday.

Misses Opal Childers and Lucille Coleman will leave Saturday by plane for Miami Beach, Florida, where they will spend a ten day vacation.

Mrs. Talmadge Fulp accompanied her daughter and grandson, Mrs. Connor and Dave Talmadge Fulp, Jr., to Roanoke Tuesday to spend several weeks.

Mr. and Mrs. H. R. Fleetwood and son, Johnnie, of Halifax spent the week-end with her mother, Mrs. A. Higginbotham. Johnnie remained for the week.

Mr. and Mrs. W. J. Hurt, or Appomattox, formerly of Appomattox, have announced the birth of a son, Arthur William Hurt, born on March 27, at the Virginia Baptist Hospital.

Mrs. Norman E. Wooldridge is visiting at her home here after recent operation.

Mrs. Jack H. Williams, of Georgia and Miss Eleanor Wooldridge on Tuesday night.

C. F. James, who was called to Livingston, Alabama, due to the illness of his father-in-law, Dr. J. McCain, has returned to his home here. Dr. McCain is recovering at his home, after a recent operation.

Mr. and Mrs. J. Lloyd Hudson spent Sunday in Roxboro, N. C.

Mr. and Mrs. Wesley Stanley and family spent Sunday in Roanoke with Mr. and Mrs. Harry Belcher. They also called to see Mr. and Mrs. Clyde Johnson.

Revival services are in progress this week at Liberty Church.

Mr. and Mrs. Tommy Stanley were dinner guests Easter of Mr. and Mrs. Wesley Stanley.

Mrs. Willie Edwards, of Fredericksburg spent Easter Monday with her sister, Mrs. Wesley Stanley.

Mr. and Mrs. Algie Almond and daughter, Alice Faye called to see Mr. and Mrs. Ray Almond recently.

Carolyn Mays has returned home from the hospital.

Science Discovers New Uses For Large Lignite Reserves

Scientific progress has opened new possibilities of a rich future for lignite, a fuel that for centuries has been known as one of the poorer members of the coal family.

The United States has huge known lignite reserves estimated at more than 900 billion tons. In the past these underground deposits have had little commercial value. But the recent success of the U. S. Bureau of Mines in converting raw lignite into multi-purpose industrial gas may be the forerunner of a new industry.

Scientists say the gas can be used for heating and for the manufacture of synthetic gasoline and lubricants, alcohol, ammonia, and dyes. Germany, which also has large quantities of the so-called "brown coal," pioneered in this work before World War II.

Lignite, although a low-grade coal, somewhat resembles decayed wood. It was formed in geologically recent times; good grades of coal are much older. As much as 40 per cent of lignite content is moisture. The fuel disintegrates on exposure to air and has a tendency toward spontaneous combustion. Unless specially treated it has only half the heating value of the best bituminous coal.

For these reasons little use has been made of lignite in countries richly endowed with good coal. Relatively small amounts have been mined in the United States. But lignite represents nearly one-third of the nation's total solid fuel reserves. Virtually all U.S. lignite is found in the states of North Dakota, South Dakota, and Montana.

Support the Red Cross.

Play safe—drive carefully.

ENGAGEMENT ANNOUNCED

Mrs. J. Kirk Megginson, of Appomattox announces the engagement of her daughter, Dorothy Dare to Crawford Watt Harris, son of Mr. and Mrs. Lewis Harris, of Gladstone.

The wedding is planned to take place on June 7.

TWO NEW HYBRIDS ON LIST MAY BOOST CORN PRODUCTION

Virginia's corn production is slated for another boost as two new hybrids take their place on the official recommended list.

Dr. Clarence F. Genser, agronomist at Virginia Experiment Station, says the two newcomers, U. S. 505 and Ohio C54, both are high-yielders and have good standability.

U. S. 505, which matures about the same time as Ill. 200, is recommended west of the Blue Ridge as a full season hybrid, and in Piedmont Virginia as an early hybrid. It has consistently outyielded the more familiar U. S. 13 and Ill. 200 in all sections of the state. Although U. S. 505 is not recommended in the coastal plain because of poor grain quality, it has been much better there than either of the other two hybrids mentioned. In other sections of the state, the quality of the grain is much better than Ill. 200, particularly in the Piedmont, where U. S. 505 is expected to be best adapted. It has the added advantage of being more resistant to leaf blight than either U. S. 13 or Ill. 200.

The other new hybrid, Ohio C54, is recommended as an early hybrid west of the Blue Ridge and in Northern Virginia, and for early grazing off in Tidewater Virginia. It is very resistant to stalk rot, and to all strains of leaf blight found in Virginia.

Cabbage Production

In the United States, New York leads in the production of cabbage for both fresh and sauerkraut markets. Texas and Florida, with their later crops, are close competitors in the fresh market. Wisconsin rates second in the output for sauerkraut. Cabbage—whose name is an Anglicized form of the French word "caboche" (a head)—is a member of the Brassica family which includes such diversified types as Brussels sprouts, cauliflower, kale, broccoli, turnip and rutabaga. It is generally classified in terms of head shape and comes in three colors—green, white and red (magenta to purplish).

Find Means for Preventing Brown Stain in Sugar Pine

Research has again paid off for the western pine industry.

Minor alterations in manufacturing routines can virtually eliminate brown stain in sugar pine lumber—an occurrence which has caused up to 25 per cent downgrading of sugar pine by many mills in northern California and southern Oregon.

Investigation affirmed previous research discoveries that storage time at any point in the harvesting or manufacturing processes prior to seasoning is instrumental in producing stain. But it also pinpointed the phase where most of the trouble begins.

Most important to prevention of brown stain development is rapid handling of green lumber between the time it is sawed and the time it is placed in the dry kiln. It is here that most brown stain, which appears only after seasoning has been completed, apparently gets its start.

Curiously, the study showed that air seasoned lumber develops little stain.

The investigation included study of all methods of logging and manufacturing commonly used in the sugar pine producing areas. It included "hot logging" wherein logs are felled, immediately hauled to the mill and sawn at once, and storage logging, where logs are stored in the woods, in cold deck or in mill pond for periods ranging from two months to one year.

New or Old Oaks?

Dr. Cornelius H. Muller, associate professor of botany at Santa Barbara college of the University of California, had serious doubts as to whether newly claimed specimens of oaks in California and Texas were really new.

As a consequence, he went to the first scientific records on this subject, found in herbariums of Spain, where they had been sent by early settlers of California. Under botanic rules, the first published description of a species officially names the species, and his examination of dried specimens dating before 1800 showed that some of what had been recently claimed as new species were in reality discovered long ago.

In addition to studying in herbariums in Madrid, where he found that he was the first scientist to have gone to the basic information in nearly 100 years, Dr. Muller also visited herbariums in Geneva and Copenhagen.

Way Back When

Origin of the word "Bible" which has long been a sacred word in the English language, referring to the Old and New Testament, can be traced directly back to two pagan cultures. The Phoenicians "wrote their records on papyrus, made from papyrus reeds from which comes the English word paper. Moreover, Phoenician traders brought papyrus to Greece from their own old city of Byblos, so the Greeks called books of papyrus byblos, or biblia, from which comes the English word, Bible, meaning a book of books."

Good Poultry Care

Good care of the poultry flock calls for sanitation. Another important thing to remember is that the amount of heat required depends upon kind of house, kind of brooder, and kind of chicks. Keep chicks comfortable; avoid over heating. Allow at least one square foot of floor space for every two chicks. Never place over 250 to 350 chicks around one brooder. One four-foot hopper for each 100 chicks should be provided.

Play safe—drive carefully.

Dial 2811 for Vimes-Virginian.

Friday & Saturday Specials

25 Lb. bag Sunlight Flour	1.69
